<http://www.herrett.com.cn>

Tel:027-87630899 Fax:027-87632899

**63 measured quantities**

**8 energy meters**

**5 average power values P, Q, S each**

### Application

The A 210/A 220 power measuring instrument is suitable for control panel mounting and measures all the important measurands in 3-phase and single-phase systems.

It displays the measurands with a high contrast 14 mm high LED display. The instrument is also suitable for measurements in high and middle voltage systems because of the freely programmable factors for the current and voltage transformers.

It replaces a large number of analog instruments and delivers high-accuracy values.

The basic execution is an instrument with 2 S0-outputs, which can be programmed as pulse or limit outputs. Extension modules increase the functionality and flexibility. The EMMOD 201 module has an RS232/RS485 interface and supports data exchange with a control system via MODBUS RTU. Memory and a digital input (switching between high and low tariffs) for monitoring, or the storage of average power values (load profile) complete the functionality. The user-friendly A200*plus* software supports parameter setting and reading the measured values.

The EMMOD202 has 2 galvanically isolated analog outputs. Any of the important input measurements can be assigned to the 4 - 20 or 0 - 20 mA signal, and it is possible to program an inverted characteristic.

EMMOD203 users can communicate with the Ethernet and Internet worlds with the MODBUS protocol over TCP/IP and HTTP. In addition, the module has an extensive memory, which supports backed up recordings for up to one year. The data are recorded with an exact time stamp, which is given by an internal, battery backed up clock.

Further modules are the EMMOD204 (Profibus-DP), the EMMOD205 (LON) and the EMMOD206 (M-Bus).

All the modules can be upgraded by simply plugging in the extension module without having to open the power monitoring instrument. A separate power supply is not required.

### Features

- Measurement of current, voltage, active, reactive and apparent power, active and reactive energy, neutral conductor current, power factor and frequency
- 4 meters for active power: Incoming/outgoing with high/low tariff
- 4 meters for reactive power: Inductive/capacitive with high/low tariff
- 5 values each for active, reactive and apparent power averages with programmable interval times

- Two S0-outputs for pulse or limit values
- Dimensions: SINEAX A 210: 96 x 96 x 46 mm  
SINEAX A 220: 144 x 144 x 46 mm
- Programmable conversion factors
- Flexible power supply with an AC/DC wide-range power supply unit
- Electrically isolated current inputs (1 A or 5 A)
- Upgrade extension modules with RS232/RS485 interface, load profile memory, MODBUS, synchronizing input, analog outputs, Ethernet, Profibus-DP or LON
- Accurate measured values for U, I  $\leq$  0.5%, F  $\leq$  0.02 Hz, others 1%
- Storage of minimum and maximum values
- Measurement in single-phase systems, 3-wire and 4-wire systems in 4 quadrant operation

### Benefits

- High functionality (63 measurand values) in a compact form (depth 46 mm)
- Therefore low costs for purchase, engineering and installation
- Safe 3-way galvanic isolation between all circuits and between the 3 current inputs
- Large LED display that can be read from a distance, especially suitable for badly lit rooms
- Robust front (IP 66) for tough industrial applications
- Storage of all counter values, the min./max. values, the display mode and the programmed data on failure of the power supply

# SINEAX A 210 / A 220

### Function

The instrument measures the currents I1, I2, I3 and the voltages U1, U2, U3, the frequency, and the phase angles between the individual currents and voltages. All the other measurands are calculated from these. The measurements are made internally via integrated current transformers. Therefore it is possible to make direct connections without an external transformer.

Each input is sampled 32 times per cycle. This allows measurements to be made including up to the 15th harmonic.

The calculation of the measurands is made in accordance with DIN 40 110 part 1 and part 2, however in 4-quadrant operation.

In the figures at this data sheet only SINEAX A 210 is shown. Display and operating are identical with the A 220.

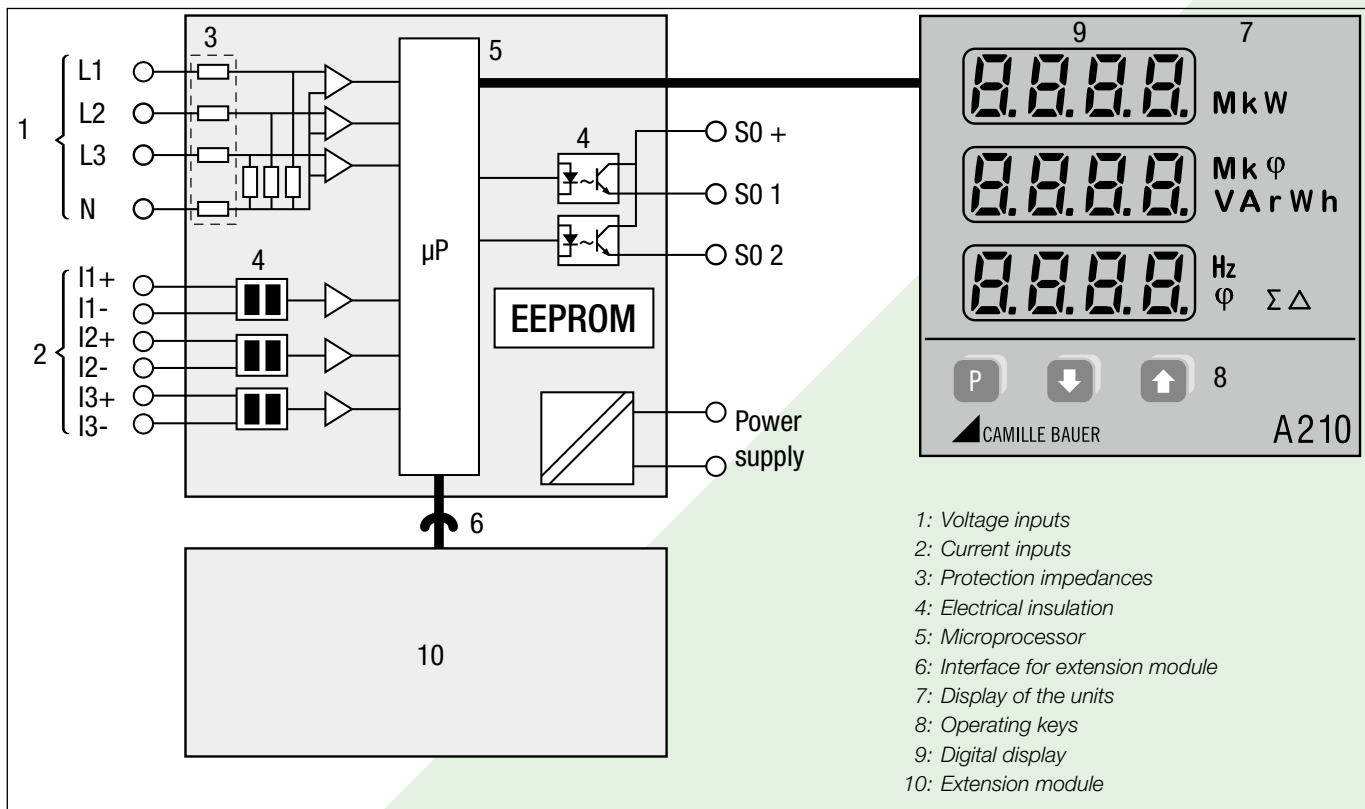

Fig. 1. Block diagram.

**Table 1: Standard versions**

The following transducer versions are available as standard versions. It is only necessary to quote the **Order No.:**

Description	Order Number A 210	Encoding item
500 V / 5 A, power supply 100 to 230 V AC/DC	149 783	210-121200
500 V / 5 A, power supply 24 to 60 V AC/DC	150 300	210-121100
500 V / 1 A, power supply 100 to 230 V AC/DC	152 447	210-111200

Please complete the Order Code 210-1... . acc. to "Table 2: Specification and ordering information" for versions with user-specific input ranges and/or variable sensitivity.

**Table 2: Specification and ordering information** (see also Table 1: "Standard versions")

### Technical data

#### System/application

Single-phase, 3-wire balanced or unbalanced, 4-wire balanced or unbalanced, 4-quadrant operation

#### Measurements available

Measured quantities	Measuring path	max	min
Voltage	1-N, 2-N, 3-N	●	●
Voltage	1-2, 2-3, 3-1	●	●
Current	1, 2, 3, N	●	
Current $I_{avg}$ (bimetal -15 min/ slave pointer)	1, 2, 3	●	
Active power P	1, 2, 3, $\Sigma$	●	
Reactive power Q	1, 2, 3, $\Sigma$	●	
Apparent power S	1, 2, 3, $\Sigma$	●	
$\cos\varphi$ (4-quadrant display)	1, 2, 3, $\Sigma$		
$\cos\varphi$ inductive min.	1, 2, 3		●
$\cos\varphi$ capacitive min.	1, 2, 3		●
Frequency	U, I		
P-meter incoming/outgoing (HT/ NT)	$\Sigma$		
Q-meter ind./cap. (HT/NT)	$\Sigma$		
5 active power interval value	$\Sigma$		
5 reactive power interval values	$\Sigma$		
5 apparent power interval values	$\Sigma$		

#### Programmable values (basic unit)

Trip points, pulse rate, transformer ratio, type of system, interval time for average power values.

Programming can be locked with a jumper at the back of the instrument.

However, the limit values can still be changed.

All min. and max. values and the counter values can be reset. The resetting of the counter values can also be blocked with the above mentioned jumper.

All the measurands, the selected display, the counter values and the programmed data are kept on a power failure.

#### Factory default

Brightness:	(mid setting)
Limit value / S01:	Off
Limit value / S02:	Off
Transformer ratio:	1 : 1
Jumper:	Not in the LOCK position
Connecting mode:	4-wire asymmetric load
Synchronizing interval:	15 min.

#### Applicable regulations and standards

IEC 1010 resp. EN 61 010 Safety regulations for electrical measuring, control and laboratory equipment

EN 60 529	Protection types by case
DIN 43 864	Current interface for the transmission of impulses between impulse encoder counter and tarif meter (S0 output)
DIN 40 110	AC quantities
IEC/EN 61326-1 IEC/EN 61326/A1	Electrical equipment for measurement, control and laboratory use, EMC requirements
EN 60 688	Electrical measuring transducers for converting AC electrical variables into analogue and digital signals
IEC 68-2-1/-2/-3/-6/-27 resp. EN 60 068-2-1/-2/-3/-6/-27	Ambient tests -1 Cold, -2 Dry heat, -3 Damp heat, -6 Vibration, -27 Shock

#### Measuring inputs

Nominal frequency:	50, 60 Hz
Nominal input voltage:	Phase-phase: 500 V Phase-N: 290 V
Nominal input current:	5 A or 1 A
Waveform:	Sine
Own consumption:	Current circuit: $\leq I^2 \cdot 0.01 \Omega$ Voltage circuit: $\leq \frac{U_{LN}^2}{300 \text{ k}\Omega}$

#### Continuous overload withstand

10 A at 346 V in single-phase AC system  
10 A at 600 V in three-phase system

#### Short duration overload withstand

Input variable	Number of applications	Duration of overload	Interval between two overloads
577 V LN	10	1 s	10 s
100 A	10	1 s	100 s
100 A	5	3 s	5 min.

#### Measuring range

U, I, S:	$\leq 120\%$ of nominal value
P, Q:	$\leq \pm 120\%$ of nominal value
F:	45 to 65 Hz
$\cos\varphi$ :	$\pm 1$
Overload indicator:	oL

The frequency is measured from the current or voltage. The voltage has priority.

### Pulse/limit value outputs

Depending on the function selected, the two digital outputs can be used either as pulse outputs for active and reactive energy or as limit signals.

The outputs are passive, and are galvanically isolated from all the other circuits by opto-couplers. They are suitable to drive tariff devices (S0-standard DIN 43 864) or 24 V-relais.

$U_{ext} \leq 40 \text{ V DC}$  (OFF: leakage current  $\leq 0.1 \text{ mA}$ )  
 $I_L \leq 150 \text{ mA}$  (ON: terminal voltage  $\leq 1.2 \text{ V}$ )

### Limit value outputs:

the limits can be associated with any measurand. Depending on the type of connection an OR or an AND function is possible for the following values.

3-wire unbalanced load:  $U_{12}/U_{23}/U_{31}, I_1/I_2/I_3, I_{avg1}/I_{avg2}/I_{avg3}$

4-wire unbalanced load:  $U_1/U_2/U_3, U_{12}/U_{23}/U_{31}, I_1/I_2/I_3, I_{avg1}/I_{avg2}/I_{avg3}, P_1/P_2/P_3, Q_1/Q_2/Q_3, S_1/S_2/S_3, PF_1/PF_2/PF_3$

Alarm ON: OR function of the phase measurands

Alarm OFF: AND function of the phase measurands

Delay time: Fixed at 1 s (cannot be modified)

### Pulse outputs:

The reactive and active energy can be read out at the pulse outputs in the form of standard S0 pulses for the driving of electronic and electromechanical counting mechanisms.

The pulse rate is programmable:

1 ... 5000 Imp./Wh ... GWh resp. 1 ... 5000 Imp/varh ... Gvarh

The duration of the pulses cannot be programmed and also cannot be changed by hardware means.

Pulse duration:  $> 100 \text{ ms}$

For systems with external transformers, the pulses are for the primary energy data.

### Power supply

DC, AC power pack 50 to 400 Hz

100 to 230 V AC/DC  $\pm 15\%$  or 24 to 60 V AC/DC  $\pm 15\%$  (UL) 85 to 125 V DC

Power consumption:  $< 3 \text{ VA}$  (without interface module)

### Display

14 mm LED digital display; adjustable brightness

3 digits with sign, frequency: 4 digits, energy: 8 digits

Colour: red

### Zero value suppression

PF resp.  $\cos\phi$ :

Display ---, if  $S_x < 0.2\% S_{nenn}$

Currents:

Display 0, if  $I_x < 0.1\% I_{nenn}$

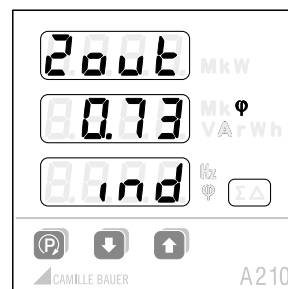

### Example of the display for 4-quadrant measurements

### Safety

Protection class: II (voltage inputs with protection impedances)

Measuring category: III

Pollution degree: 2

Measurement voltage: 300 V

Test voltage: Between current inputs, power supply, digital outputs, terminals of the plugged-in module: 3700 V / 50 Hz / 1 min.

On voltage inputs:  
4.25 kV 1.2/50 μs

Module connections: The pin rail at the back is connected to the voltage inputs via a protection impedance. Only the permitted modules can be plugged-in!

Enclosure protection: Front IP 66, terminals IP 20

Inputs, outputs and power supply are electrically isolated. The current inputs are electrically isolated from each other.

### Accuracy data

Reference conditions acc. to IEC 688 resp. EN 60 688

Sine 50 - 60 Hz, 15 - 30°C, application group II

Measurement accuracy (related to nominal value)

Current, voltage	± 0.5%
Power	± 1.0%
Power factor	± 1.0%
Energy	± 1.0%
